

THE RIGHT LEVEL OF PROTECTION FOR YOUR NEEDS

THE STERILISATION PACKAGING AND STORAGE AND TRANSPORT SOLUTION FROM HALYARD AND BELINTRA.

In the name of patient safety, Halyard and Belintra have teamed up to bring you a sterilisation packaging and storage and transport solution that combines Halyard's sterilisation wrap products with Belintra's wrapped tray storage and transport system.

This solution provides a critical visual confirmation through visual breach indication to signal any cuts, tears or holes.¹ It reduces the number of breaches resulting from handling and transport and reduces cost and amount of re-processing required.²

LESS RISK. MORE ASSURANCE.

- Halyard's SMART-FOLD[®] Sterilisation Wrap is three times more tear-resistant than conventional wrap.³ HALYARD[®] Wrap provides superior microbial barrier protection with our Powerguard[®] Technology.⁴
- Belintra "No Stacking" UBeFlex[®] storage system enables your facility to have a full overview of your inventory and to store sterilised goods as required in EN ISO 11607.
- Belintra's STERISYSTEM[®] baskets and shelves reduce touchpoints down to two.

HALYARD[®] SMART-FOLD[®], QUICK-CHECK[®] AND INTERLEAVED[®] Sterilisation Wraps feature two contrasting layers – translucent and opaque – bonded together for quick and easy breach indication¹ to ensure that instrument sterility is uncompromised.

HALYARD'S CLINICALLY SUPERIOR PRODUCTS. BELINTRA'S EFFICIENT STORAGE AND TRANSPORT.

The Halyard and Belintra Solution looks at the entire sterile packaging system and focuses on maintaining the sterility of your surgical instruments with distinct and unique advantages.

BEFORE

AFTER

MULTIPLE BENEFITS — ONE SOLUTION:

- No Stacking
- Improved Organisation
- Saves Valuable Storage Space
- Improves reduction in reprocessing costs due to tears and holes in the wrap²

"One great thing about this complete system is that it reduces the chances for tears, cuts and holes in our wraps which then provides (a lot) less likely chance for contamination of our instruments."

Phil Van Gorp
Sterile Processing and Supply Manager
at an ambulatory surgery center

START-TO-FINISH PROTECTION

Together, Halyard and Belintra have a complete product portfolio within sterilisation packaging and a storage and transport system.

This unique solution helps to reduce opportunities for contamination, removes stacking instrument sets and reduces touchpoints.

1. SURGICAL
INSTRUMENT & TRAY
DECONTAMINATION

2. PREP, PACK &
STERILISATION

3. STORAGE & TRANSPORT
TO OPERATING ROOM

4. STERILE OPERATING
ROOM PRESENTATION

A SYNERGISTIC COLLABORATION. A CUSTOMISABLE SOLUTION.

This synergistic collaboration was formed to help protect patients from infection and to save lives.

It is also important to note that the introduction of Belintra's storage and transport system can be staggered and/or customised depending on your needs.

SERVICE & SUPPORT

- Halyard's remarkable service is professionally delivered by the Halyard Clinical Support Team that provides In-Service Training, Evaluations & Utilisation Reviews at no cost to facilities.
- Halyard also offers specific tailored solutions for hospitals seeking to reevaluate and replace rigid sterilisation containers given new scientific data.
- Belintra's extensive sales network can help facilities in assessing their storage and transport needs inclusive of room layout drawings.
- Belintra's on-site training for staff can be provided for optimised storage and transport between CSSD and operation theatre.

Research was funded by Halyard Health, Inc. and conducted by Applied Research Associates, an international research laboratory. Halyard Health did not have any direct involvement in execution of the study. The study took place in an independent laboratory in Panama City, Florida, and the study was conducted by independent researchers.
